Claim 17 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The claim is improper in that it appears to be relying on the user for definition. The phrases "straddling the user", "sandwich the user", and "the weight of the user is supported", are deemed questionable in this regard.

The phrase "mating with the seat member with the straddle edges" is confusing and unclear, and it is not seen how the user is "sandwiched" between the panels and the seat member.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Baker.

Figure 4 shows structure as claimed, including side panels 14 that are hinged at their edges to form a "straddle edge" with slots 38 formed therein. A "seat" member 32 includes seat stops 36 which engage the slots 38.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject

matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 9 and 17, so far as definite, are rejected under 35 U.S.C. 103(a) as being unpatentable over Baker.

To have utilized a conventional hinge mechanism to interconnected the side panels, for durability purposes, would have been an obvious modification to one with ordinary skill in the art.

The method of set up and assembly of the Baker device would have encompassed the corresponding method steps in claim 17.

Claims 2-8 and 10-16 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Steuer, Downing, Kyte, Milner, Jr, Calco, Swilley, Oyediran, Jones, and Cochran show various features of the invention.
